

E. Game of Stones

time limit per test: 3 seconds
 memory limit per test: 256 megabytes
 input: standard input
 output: standard output

Sam has been teaching Jon the *Game of Stones* to sharpen his mind and help him devise a strategy to fight the white walkers. The rules of this game are quite simple:

- The game starts with n piles of stones indexed from 1 to n . The i -th pile contains s_i stones.
- The players make their moves alternatively. A move is considered as removal of some number of stones from a pile. Removal of 0 stones does not count as a move.
- The player who is unable to make a move loses.

Now Jon believes that he is ready for battle, but Sam does not think so. To prove his argument, Sam suggested that they play a modified version of the game.

In this modified version, no move can be made more than once on a pile. For example, if 4 stones are removed from a pile, 4 stones cannot be removed from that pile again.

Sam sets up the game and makes the first move. Jon believes that Sam is just trying to prevent him from going to battle. Jon wants to know if he can win if both play optimally.

Input

First line consists of a single integer n ($1 \leq n \leq 10^6$) — the number of piles.

Each of next n lines contains an integer s_i ($1 \leq s_i \leq 60$) — the number of stones in i -th pile.

Output

Print a single line containing "YES" (without quotes) if Jon wins, otherwise print "NO" (without quotes)

Examples

input	Copy
1 5	
output	Copy
NO	

input	Copy
2 1 2	
output	Copy
YES	

Note

In the first case, Sam removes all the stones and Jon loses.

In second case, the following moves are possible by Sam:
 $\{1, 2\} \rightarrow \{0, 2\}, \{1, 2\} \rightarrow \{1, 0\}, \{1, 2\} \rightarrow \{1, 1\}$

Divide by Zero 2017 and Codeforces Round #399 (Div. 1 + Div. 2, combined)

Finished

→ Virtual participation

Virtual contest is a way to take part in past contest, as close as possible to participation on time. It is supported only ACM-ICPC mode for virtual contests. If you've seen these problems, a virtual contest is not for you - solve these problems in the archive. If you just want to solve some problem from a contest, a virtual contest is not for you - solve this problem in the archive. Never use someone else's code, read the tutorials or communicate with other person during a virtual contest.

In each of these cases, last move can be made by Jon to win the game as follows:
 $\{0, 2\} \rightarrow \{0, 0\}, \{1, 0\} \rightarrow \{0, 0\}, \{1, 1\} \rightarrow \{0, 1\}$
